Single Use Gamma Irradiated Hollow Fiber Cartridges. Easy and Reliable

The **mini-BioProducer Green** hollow fiber cartridges are designed for pilot and production scale production and are the perfect tools for process development. With a surface area of 2.50 m², the **mini-BioProducer41 Green** HF cartridge can accommodate batch volumes between 25L and 250L with a typical permeate flow rate of 75-150 L/hr for ultrafiltration applications and 50-100 L/hr for microfiltration applications.

The **mini-BioProducer Green** cartridges utilize WaterSep's antifouling, low binding, modified polyethersulfone membrane (m-PES) which provides a process flux and product recovery that often exceeds other cross flow devices.

The **mini-BioProducer41 Green** hollow fiber cartridges are offered with the same path length as other high performance WaterSep HF cartridges, which makes scale up and scale down easy and predictable.

Mini-BioProducer Green cartridges are also offered as part of fully integrated open architecture single use crossflow assemblies available with pressure sensors, flow meters, pumps, aseptic connectors and/or bags.

The **mini-BioProducer41 Green** cartridges offer a true single use crossflow system that provides:

- Significant cost savings over traditional cassette formats.
- Gamma irradiated - ready to use - no pre-rinse.
- No humectants - 80% less extractables, see [Extractables Flush Analysis](#).
- No need for time-consuming cleaning validation.
- Reduced risk of cross contamination.
- Consistent membrane performance batch to batch.
- Self-contained – no assembly – no expensive hardware – no membrane installation.
- Every HF cartridge is integrity tested and has an individual lot number for easy traceability.

TYPICAL APPLICATIONS

- Clarification of **mammalian/CHO** cell cultures and maximizing **protein recovery**.
- **Cell-harvest**. (Excellent results have been achieved with both *E. Coli* whole cells and *E. Coli* lysates, as well as other microbial process streams.)
- Concentration and purification of **vaccines**.
- Concentration and diafiltration of **gene therapy** products.
- Concentration/diafiltration of **monoclonal antibodies, recombinant proteins, biological macromolecules and peptides**.
