

Investigator™ 12 Green

Single Use Gamma Irradiated Hollow Fiber Cartridges. Easy and Reliable

The Investigator™ Green crossflow hollow fiber membrane cartridges are designed for pilot scale and small scale production and is the perfect tool for process development. With a surface area of 0.13 m², the Investigator™ 12 Green can accommodate batch volumes that range from 1L to 6L with an average permeate flow rate of 3.9 to 7.8 L/hr for ultrafiltration applications and 2.6 to 5.2 L/hr for microfiltration applications.

The Investigator™ Green cartridges are gamma irradiated and ready to use, and utilize WaterSep's well accepted antifouling, low binding, modified polyethersulfone membrane (m-PES) which provides a process flux and product recovery that typically exceeds other crossflow devices.

The Investigator™ 12 Green hollow fiber cartridges are offered with the same path length as other high performance WaterSep HF cartridges, which makes scale up/scale down easy and predictable.

Investigator™ Green cartridges are also offered as part of fully integrated open architecture single use crossflow assemblies available with pressure sensors, flow meters, pumpheads, aseptic connectors or bags.

The Investigator™ 12 Green cartridges offer a true single use crossflow system that provides:

- Significant cost savings over traditional cassette formats.
- Gamma irradiated - ready to use - no pre-rinse required.
- No humectants - 80x less extractables, see [Extractables Flush Analysis](#).
- No need for time-consuming cleaning validation.
- Reduced risk of cross contamination.
- Consistent membrane performance batch to batch.
- Self-contained – no assembly – no expensive hardware – no membrane installation.
- Every HF cartridge is integrity tested and has an individual lot number for easy traceability.

TYPICAL APPLICATIONS

- Clarification of **mammalian/CHO cell** cultures, providing maximum protein recovery.
- **Cell-harvest**. Excellent results have been achieved with both *E. Coli* whole cells and *E. Coli* lysates, as well as other microbial process streams.
- Concentration and purification of **vaccines**.
- Concentration and diafiltration of **gene therapy** products.
- Concentration/diafiltration of **monoclonal antibodies, recombinant proteins, biological macromolecules and peptides**.
